- **UNIFORM MORTAR PLACEMENT**

The Roller Screed offers uniform placement of the mortar and is essential for a consistent and successful epoxy flooring installation. Our Roller Screed dispenses epoxy mortar with exceptional ease and uniformity.

- **STABILIZING OUTRIGGER WHEEL**

The rear outrigger wheel adds greater stability than conventional screed boxes. The position of this rear wheel has eliminated the need to add weight to the front of the units to reduce inconsistencies of the operator.

- **TWO HEAVY-DUTY MODELS**

The Roller Screed comes in two widths, 24" and 32". The 24" wide model holds 2,325 cubic inches of mortar, while the 32" wide model holds 3,810 cubic inches of mortar. The deflector plate dispenses mortar up to 1" thick, extends past the hopper to reduce lap marks, and easily adjusts with wing nuts. Both sizes are made of heavy gauge steel that will tolerate flame burning to remove cured epoxy.

- **REVOLUTIONARY HANDLE DESIGN**

The handle is aligned at 165° for a convenient resting position and is shaped to permit the dumping of mortar directly from a wheelbarrow. The handle and wheels are pinned for easy removal to clean or transport, and a utility tray conveniently holds support tools.

STABILIZING OUTRIGGER WHEEL

The Roller Screed's outrigger wheel does not allow the operator to lift up on the box assuring a mortar placement of uniform thickness everytime.

HANDLE DESIGN

The Roller Screed's unique 165° handle design allows for extremely easy wheelbarrow mortar loading.
