

americancrete Terrazzo Floors utilizes cutting edge polyurethane technology by taking a proven industrial product and developing it for architectural applications. Our terrazzo uses the same polymers and has many advantages over the traditional epoxy systems. **americancrete Terrazzo** incorporates the tough and resilient floor system of the industrial side but has a polished decorative terrazzo effect. There are endless design possibilities, using a myriad of colour combinations. Recycled granite or glass chips or local quarried dolomites are combined in a polyurethane and concrete matrix. The product has been developed to be power troweled with **HOVERTROWEL** reducing labour and more importantly achieving a flatter matrix for grinding therefore reducing costs and improving flatness.

This Architectural product is perfect for Lab's, Front Foyers, Testing Halls, Washrooms, in fact all areas that require an Architectural hard durable surface including walls and curb detail.

Advantages of **americancrete Terrazzo Floors**

- . chemical resistance
- . thermal expansion co-efficients
 - . tensile strength
 - . compressive strength
 - . LEED compliant
 - . zero VOCs
- . uses renewal vegetable based non-food feed stock
 - . a non petrochemical-based product

Uses of **americancrete Terrazzo**

- . cast in situ floors, either industrial non-slip or ground terrazzo or combination
- . various size panels for work or wall surfaces with a seamless installation
